

The AI Briefings

AI for Talent

As you consider what AI products to adopt for your organization, here's what you need to know.

What makes AI great?

To be able to handle the complex needs of the talent industry, AI needs to be a cut above. So what makes AI great? These 3 key differences.

Trust

The AI tools you use need to be guided by responsible principles avoid any financial, legal and brand consequences. Look for tools that are compliant and built by **responsible partners**.

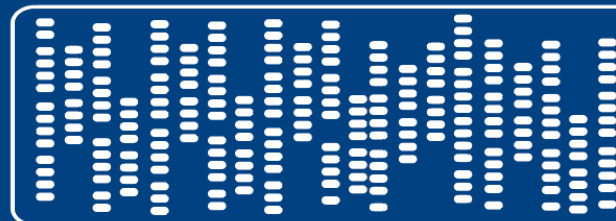

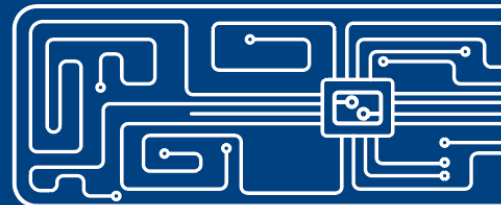

Relevant Data

All AI is built on large data pools. But, the AI tools you use need to be trained on quality talent data, to ensure accurate, high-quality results. Look for data that's **relevant, fresh and accurate**.

Powerful Infrastructure and Technology

All AI is built on data storage and Large Language Models. But, the AI tools you use need to have technology and infrastructure that's sophisticated enough to handle the problems you're looking to solve. Look for tech that's **powerful and scalable**.

When in doubt, ask yourself these three questions:

Is the technology and infrastructure powerful enough to handle my needs?

Is the data updated regularly, and relevant to the talent industry?

Is it guided on responsible and compliant systems?

How is LinkedIn approaching AI for talent?

By bringing the best of LinkedIn together: The dynamic data from our Economic Graph, the digital representation of our platform with over 1 billion members and 5M profile updates per minute. The cutting-edge AI tech of Microsoft. And the peace of mind that comes from being the most trusted platform for the 5th year in a row.

The Result? Hiring Assistant

Meet our first AI agent that helps take on time-consuming tasks on your behalf. From intake to interview, Hiring Assistant is here to help you focus on the most impactful, people-centric parts of your job.

Source the right people — even while you're interviewing others.

Focus on conversations, not logistics.

Stay in control with trusted support that keeps you informed at every step.
