# Employee Well-Being Report

#### success at work Editors' note: Welcome to Glint's first Employee Well-Being Report. This is an improved version of our 2020

One major difference from last year's reports is that we now track employee happiness at work over time. With so much change, we believe this view will help all of us better understand the wider context of fluctuations in employees' happiness levels.

Thanks for reading.

employee engagement and workforce data to better understand how

organizations can help employees be happy and successful at work.

levels continue to see record highs (see below).

## and even refuge?" For many, that place was work.

Burnout

The pandemic elevated basic human needs for safety and stability. The year-over-year rise in happiness at work reflects employees' sense of gratitude for their job in turbulent times and, in many cases, the new resources and support their organizations made available.

In 2020, organizations also gave people a sense of security.

Between August and December 2020, employee burnout rose by nearly 4%. This increase comes after burnout had already hit a two-year high in August 2020, when 5.41% of employee survey comments contained burnout signals. PRECURSORS TO BURNOUT

Employees most frequently cited feeling disconnected from colleagues as a burnout precursor. Feeling disconnected from colleagues

Top takeaway:

-20%

We can no longer rely on water-cooler talk, chance run-ins in the hallway, and after-work celebrations to build connections among employees. Assuming a return to physical offices will re-establish connections among co-workers is not the answer. In this sense, the pandemic has brought lasting change to the working world. We know through our research that employees want flexibility in where they work, and leaders are recognizing that a one-size-fits-all approach is a thing of the past.

key to connection.

The solution to feelings of overwhelming workload happens at the local level and isn't necessarily guided by an employee's gender. As for workload, the reality for women can feel disheartening.

creating connections and overcoming burnout.

Organizations best support their employees when they: Ask for frequent feedback. Reinforce shared culture and values. 3. Arm managers with feedback results. 4. Empower managers to have conversations with employees so they can find specific solutions for unique circumstances.

The insights in this edition of Glint's Employee Well-Being Report were sourced from a blend of Glint People Success Platform data and Glint-designed surveys of LinkedIn members. Happiness insights spanning 2019 and 2020 came from a

just women—by candidly talking about well-being, helping prioritize tasks, and clearing barriers. When leaders get even closer to employee feedback, and ask for it more frequently, they're better positioned to counteract the burnout levels we're seeing—no matter how an employee identifies or what industry they're in.

How we measure employee burnout: Our metric is the average percent of survey comments that express at least
