Contact Targeting: A few things to remember

Use a CSV file format using **only email** addresses in the first column.

- Check spelling to ensure the matching process is as fast as possible.
- Remove all formatting for optimal match rates.
- Ensure the first row says: email

Target influencers or decision makers for optimal response rates.

Avoid hyper-targeting; it could limit scale and delivery of your campaign. This includes:

- Uploading too small a list of contacts (we recommend at least 10,000 email contacts), or
- Layering too many targeting criteria in addition to the account list.

Larger lists will likely have better match rates.
