

Introducing Pipeline Builder

Pipeline Builder helps you grow a pipeline of interested candidates when you're hiring a lot of roles in a short amount of time. Candidates can easily share their contact information to express interest in your opportunities – and you can connect with qualified and interested talent.

Build a targeted pipeline of interested candidates for your most important roles

Reach the right talent

Target who you need to hire for your high-priority, high-volume, or hard-to-fill roles through rich media content when they visit LinkedIn.

Attract potential candidates

Landing pages with rich media bring your roles to life. Members can express interest with one click, without a lengthy application process.

Engage and follow up with candidates

Interested members' profiles and contact information feed into LinkedIn Recruiter, making it easy for your team to follow up.

“I was blown away with the results. We were able to quickly engage with so many people who were a potential fit for Autodesk.”

Jessica Boyd
Talent Brand Manager, Autodesk
