What's New in Talent Hub

Check out the latest enhancements to your recruiting workflow

Job Finder API

Securely share your organization's LinkedIn data with your technical partners

Self-generate a unique API key to create a custom corporate career page or to allow partners to access the most up-to-date open job post information from your Talent Hub contract.

Note: Admins will be able to create API keys for job posting data with **read-only** permission

Learn more by referencing the [help center](#).

API Credentials + Add new API key

Create API keys to securely share your organization's LinkedIn data with your technical partners. Currently, you can create API keys for job posting data with a read-only permission. API keys authenticate API requests and consist of 3 elements: client ID, client secret, and system user. [Learn more](#)

API types and permissions ▼

⚠ Since API keys carry many privileges, be sure to keep them secure by storing it in a safe place. Do not share API keys publicly.

API type and permission ⓘ

Posted jobs
This will share all job post data from your contract. This can be used for showing jobs on landing pages, company career pages, and more.
Read access only

ⓘ Since API keys carry many privileges, be sure to keep them secure by storing it in a safe place. Do not share API keys publicly.

Name: Talent Hub Jobs API | Description: to access jobs from ATS

API type and permission ⓘ
Select what permission this API key can access from your contract

Posted jobs
This will give you all the jobs posted in your contract.
 I acknowledge that I'm creating an API key with read-only permission.

Cancel Create API key

Job Finder API: Provide Credentials

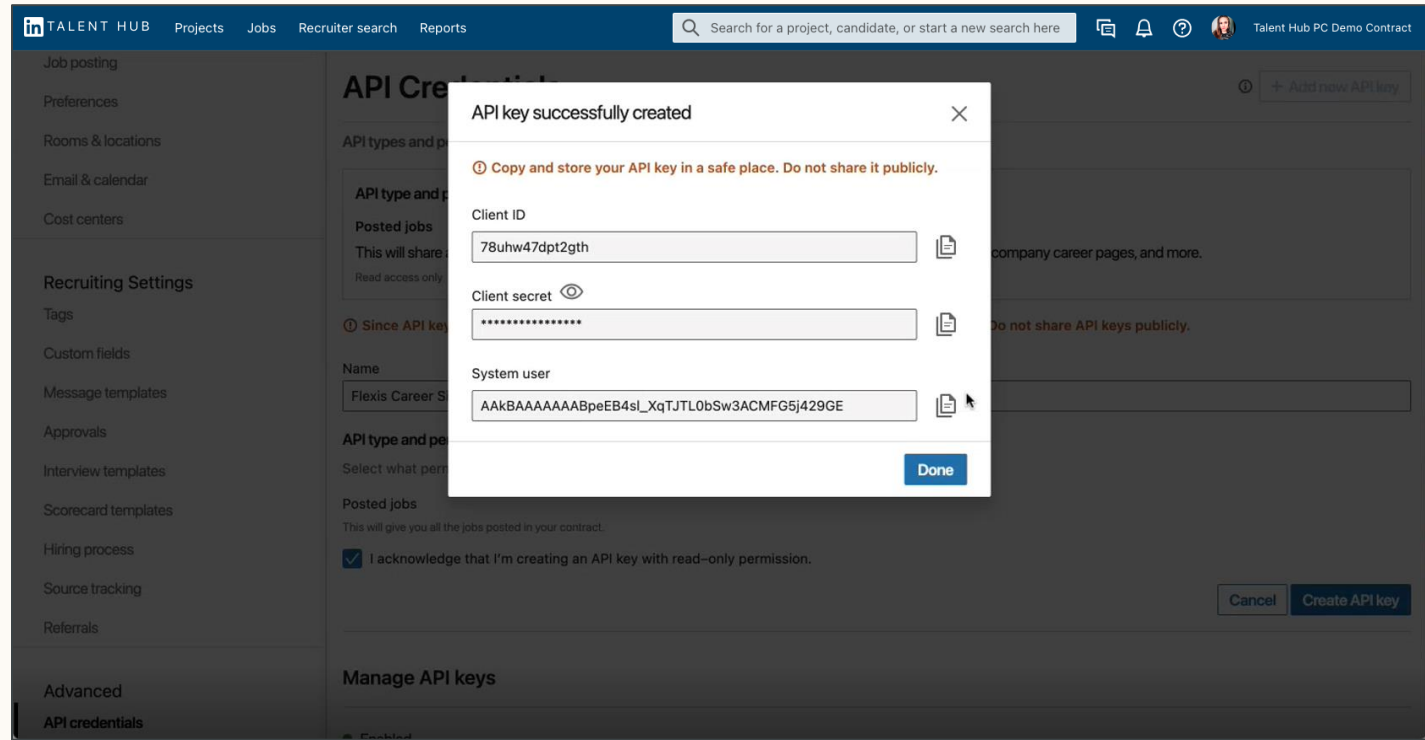

Once the API key is generated, be sure to keep it secure by storing it in a safe place. Don't share API keys publicly.

Click the copy icon located on the right of each field to provide your developer team with the following credentials:

1. Client ID
2. Client secret
3. System user

Share the [Talent Hub private integrations developer documentation](#) with your developer team.
