

Introduction

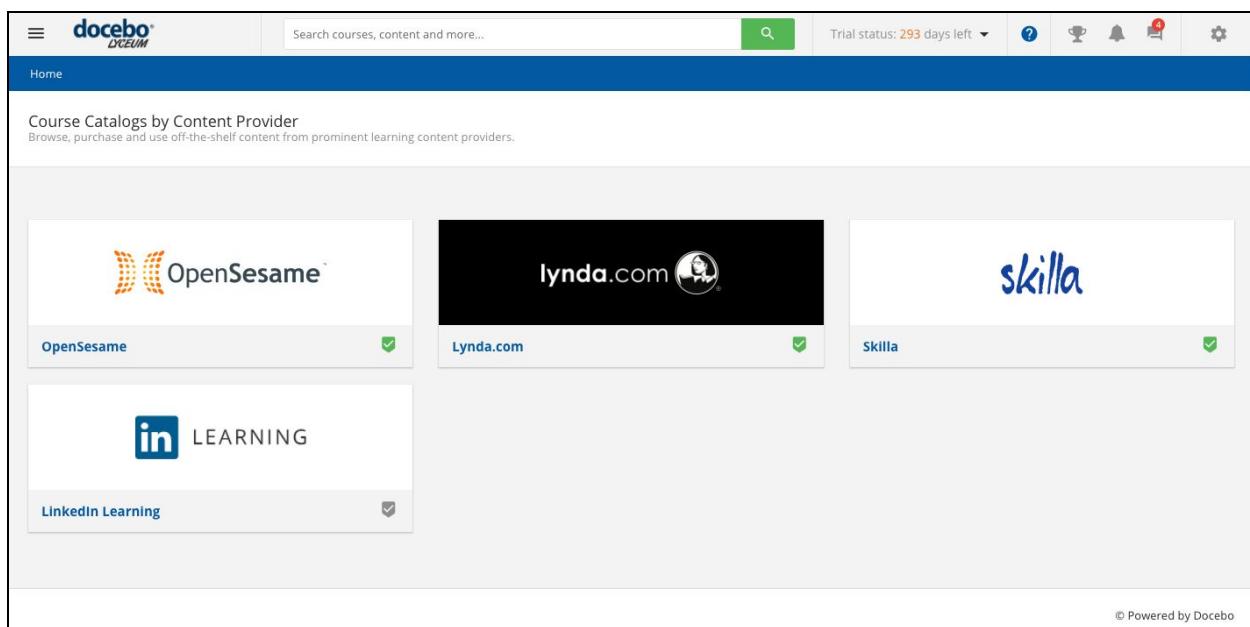

LinkedIn Learning is an online content provider offering thousands of video courses in software, creative, and business skills. When purchasing and syncing LinkedIn Learning courses into your LMS from [Docebo's Content Marketplace](#), you can directly upload them as courses, or you can store them in [Central Learning Object Repository \(CLOR\)](#) as LTI learning objects to be pushed to your courses.

This article explains how to navigate LinkedIn Learning within the context of Docebo and how to manage content from LinkedIn Learning in your LMS.

Accessing and Activating LinkedIn Learning in Docebo

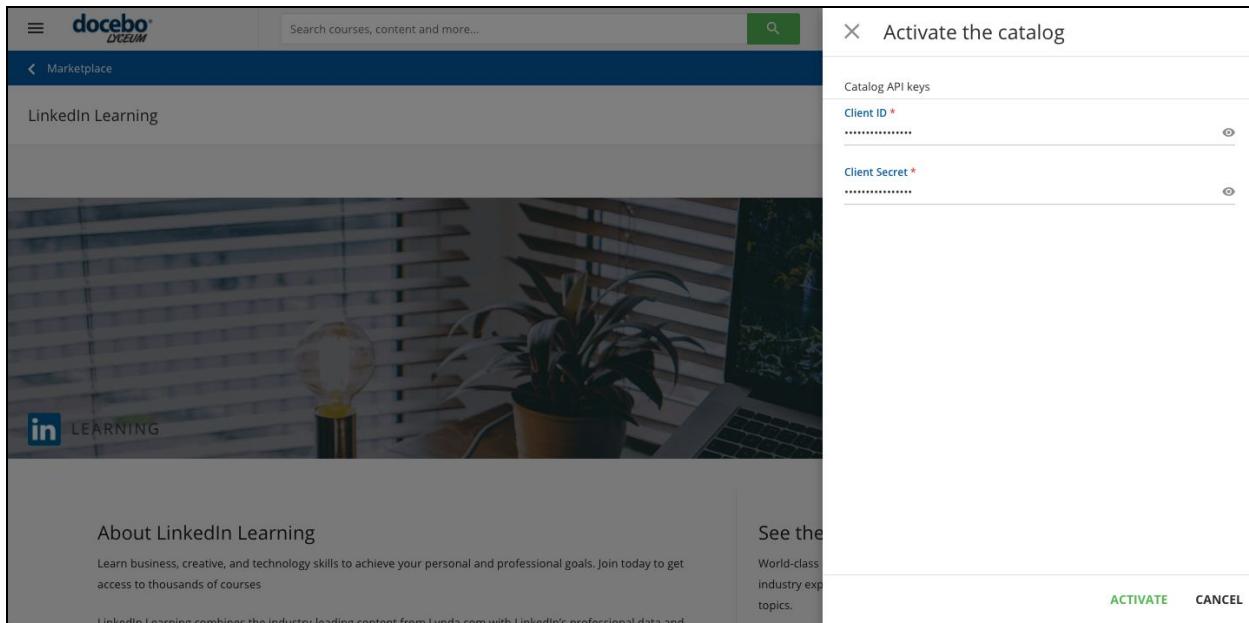

To access the LinkedIn Learning catalog in your LMS, you need to reach the Content Marketplace. Log into your Docebo platform as the Superadmin. Please note that **only Superadmins have access to the Content Marketplace**. Power Users cannot access or manage the Content Marketplace. Once logged in, access the **Admin Menu** by pressing the **gear icon** in the top right corner of the page. Then, select the **Content Marketplace** item.

On the main marketplace page, you will see all of the vendors from which you can browse, purchase, and sync off-the-shelf content. If you haven't activated LinkedIn Learning in your platform yet, the check mark in the bottom right corner of the vendor's item on the marketplace page will be **grey**.

The screenshot shows the Docebo Content Marketplace interface. At the top, there is a navigation bar with the Docebo logo, a search bar, and various user icons. The main content area is titled 'Course Catalogs by Content Provider' and includes a sub-instruction 'Browse, purchase and use off-the-shelf content from prominent learning content providers.' Below this, there are several vendor cards. The 'OpenSesame' card is white with its logo and name. The 'lynda.com' card is black with its logo and name. The 'Skillia' card is white with its logo and name. The 'LinkedIn Learning' card is white with its logo and name, and it has a small grey checkmark in the bottom right corner, indicating it is not yet activated. At the bottom right of the page, there is a copyright notice: '© Powered by Docebo'.

To begin, press the **LinkedIn Learning** item to open an iframe of LinkedIn Learning directly in your LMS. Once the iframe is loaded, press the **key icon** in the top right corner of the page. In the right panel, enter the corresponding credentials. You should contact LinkedIn Learning directly in order to receive the necessary credentials for this integration. Docebo cannot provide these credentials.

When you've entered the info, press **Activate**. You can edit your credentials at any time by pressing the **wrench icon** and inserting a different Client ID or Client Secret. Once you've activated LinkedIn Learning in your Docebo LMS, the check mark in the corner of the item on the main Marketplace page will be **green**, thus you can begin syncing content.

Adding Content from LinkedIn Learning to Docebo

To browse content in LinkedIn Learning's catalog, you can press the **Filter** item in the action bar at the top of the catalog. Now, you can search for specific content, or filter by subject and difficulty. You can also sort the catalog using the corresponding menu on the right side of the action bar at the top.

The screenshot shows the Docebo platform interface. On the left, the LinkedIn Learning Catalog is displayed with a search bar and a list of 577 items. The catalog includes filters for Subjects (e.g., Web Development, Education and Instructional Design) and Difficulty (e.g., Beginner, Intermediate, Advanced). On the right, a slideout panel titled 'Import course' is open. It has two tabs: 'Type' (selected) and 'Category'. Under 'Type', there are two options: 'Import LinkedIn Learning course(s) as Training Material in Central Repository' (selected) and 'Import LinkedIn Learning course as an LMS course'. At the bottom of the slideout panel are 'NEXT' and 'CANCEL' buttons.

When you find a course that you want to sync into your Docebo platform, press the **Import** button in the course's tile. In the right panel, select whether you want to import the course as a new course in the platform or to save it as learning object in the [Central Learning Object Repository](#).

Importing Content into the LMS as Training Material

When importing the course as a learning object, it will sync directly in your platform's CLOR. Flag the *Import LinkedIn Learning course(s) as Training Material in Central Repository* option and press **Next** at the bottom of the slideout panel. On the *Category* page, you can select into which learning object category you want to place the content, but this step is not mandatory. Press **Import** to proceed.

The screenshot shows the Docebo platform interface. On the left, there is a sidebar with a search bar and a 'LinkedIn Learning Catalog' section. The main area displays a list of courses with filters for 'Subjects' (e.g., Web Development, Education and Instructional Design) and 'Difficulty' (e.g., Beginner, Intermediate, Advanced). On the right, a slideout panel titled 'Import course' is open, showing a 'Type' tab selected. It includes a search bar for branches and a category tree with 'Docebo' and 'Test selling courses' selected. At the bottom of the slideout are 'IMPORT' and 'CANCEL' buttons.

A message at the bottom of the page will confirm that your content has been successfully imported into your platform's CLOR as a learning object. Refer to the *Managing LinkedIn Learning Content in Docebo* section of this manual for more information.

Importing Content into the LMS as a Course

When importing the course as an LMS, it will sync directly in your platform's CLOR as a learning object, then the platform will automatically create an LMS course with one learning object. Therefore, you will find the learning object in your CLOR and the course in your platform's Course Management area. Both the LMS course and the single learning object within that course will have the same name as the LinkedIn Learning course, but you can edit both the names and any other learning object details or course details after the LMS course is created.

Flag the *Import LinkedIn Learning course(s) as Training Material in Central Repository* option and press **Next** at the bottom of the slideout panel. On the *Category* page, you can select into which course category you want to place the course, but this step is not mandatory. Press **Next** to proceed.

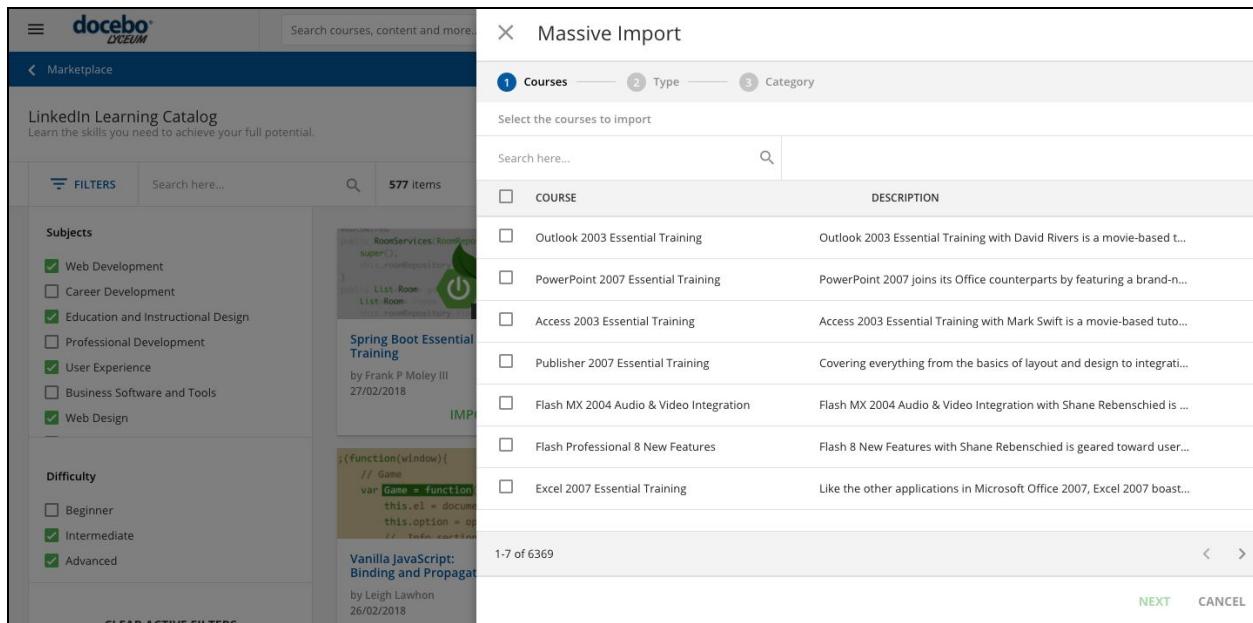

Then, flag whether you want include the course into any course catalogs that you've created in your platform. **Remember:** Even if you place the course within a catalog, you cannot resell the course. By placing the course in a catalog, users will be able to directly enroll into it, but they cannot purchase it. If you do not want to include the course in any catalogs, simple switch the *Add courses to existing catalog(s)* toggle at the top of the panel, switching it from green to grey, and press **Next** to proceed.

Finally, use the *Enroll Users to Courses* toggle at the top of the last page of the slideout panel to directly enroll users into the course. You can enroll individual users, branches, or user groups in your LMS. Then, press **Import**. A message at the bottom of the page will confirm that your content

has been successfully imported into your platform. Refer to the [Course Management section](#) of the Knowledge Base to learn more about managing courses.

Mass Importing Courses from LinkedIn Learning

Additionally, you can import multiple courses from LinkedIn Learning into the LMS in a single action. When viewing the LinkedIn Learning catalog, press the **download icon** in the top right corner of the page. For the single import, select which courses you want to import, then flag whether to import them as CLOR content or as LMS courses, and if you want to assign them to one or more catalog(s). Refer to the sections above in this article for more information about each import type.

The screenshot shows the LinkedIn Learning catalog on the left and the 'Massive Import' dialog box on the right. The catalog lists '577 items' with filters for 'Subjects' (Web Development, Education and Instructional Design, User Experience, Web Design) and 'Difficulty' (Beginner, Intermediate, Advanced). The dialog box shows a list of courses to import, including 'Outlook 2003 Essential Training', 'PowerPoint 2007 Essential Training', 'Access 2003 Essential Training', 'Publisher 2007 Essential Training', 'Flash MX 2004 Audio & Video Integration', 'Flash Professional 8 New Features', and 'Excel 2007 Essential Training'. Each course has a checkbox next to it and a 'DESCRIPTION' column. The dialog box has 'NEXT' and 'CANCEL' buttons at the bottom.

This import option does not allow you to enroll users into courses at this stage, since courses may have different types of audience. The massive import will be managed as a background job, with the import time depending on the number of courses you're importing. Please note that each course that you import from LinkedIn Learning becomes an individual course in the LMS, so if you import five LinkedIn Learning courses, you will create five courses in the LMS.

Managing LinkedIn Learning Content in Docebo

When LinkedIn Learning courses are imported as [LTI learning objects](#) in your [Central Learning Object Repository](#), they can be managed like regular LTI learning objects, and have the same [advanced settings options](#). You can refer to [this article](#) to learn more about pushing learning objects from the CLOR into courses.

Once you find the training material from LinkedIn Learning in the list of learning objects in the CLOR, press the **edit icon** in the object's row to edit the details of the learning object, as desired.

The screenshot shows the Docebo LMS Central Repository. At the top, there are buttons for 'New Category' and 'Push Training Material to Courses'. Below this, there are sections for 'Categories' and 'Training Material'. The 'Training Material' section displays a list of courses from LinkedIn Learning, including 'Acrobat 9 Pro Essential Training', 'Creative Inspirations: Troika Design Group, Design and Branding Agency', 'Parlare in pubblico: vincere la paura', and 'Access 2007 Essential Training'. Each course entry includes a 'USAGE' column showing '1 course' and a 'LINKEDIN LEARNING' column with various interaction icons.

IMPORTANT: This type of learning object (LinkedIn Learning AICC files) must be Played in New Window mode. Selecting other options will result in the learning object not being properly played. **Do not modify this option.** The content downloaded from LinkedIn Learning must be played in a new window, it cannot be embedded into the platform's course player.

The screenshot shows the 'Upload File' dialog for an AICC learning object. A warning message states: 'WARNING: You cannot change the package structure of this kind of learning object. By uploading a new package with a different structure, the learning object may not play as expected in the platform.' The 'AICC' tab is selected. The 'Additional Info' section includes a 'Select Files' button and an 'UPLOAD FILE' button. The 'Title' field is set to 'Acrobat 9 Pro Essential Training'. The 'View Mode' section shows three categories: 'Desktop', 'Tablet', and 'Smartphone'. Under 'Desktop', the 'Play in New Window' option is selected and highlighted with an orange border. The 'SAVE CHANGES' and 'CANCEL' buttons are at the bottom right.

Please Note: The learning object is marked as complete when 100% of the content has been viewed. There is no *In Progress* status for this learning object, only *Not Started* and *Complete*.

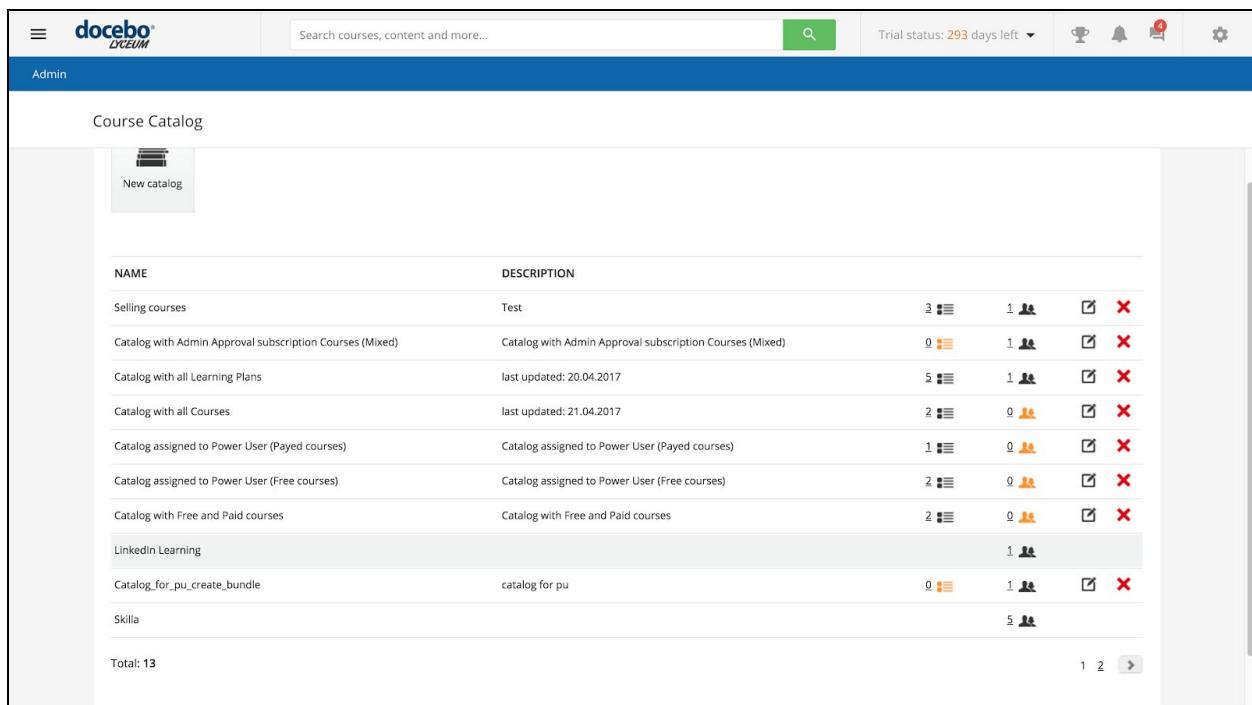

User provisioning for LinkedIn Learning content is not supported, meaning every time a Docebo user accesses LinkedIn Learning content, he or she will be automatically logged in only if he or she is

already logged into a LinkedIn session, or if an SSO system is configured in the LMS. If none of these conditions are satisfied, the user will be prompted to log in manually. If a user does not yet have a LinkedIn Learning account, he or she should press the corresponding button in the pop up box that will appear upon the user's first access to LinkedIn Learning content. For any questions regarding the user provisioning process, you should refer to [LinkedIn Learning's help center](#).

Managing the LinkedIn Learning Catalog in Docebo

When LinkedIn Learning is enabled, the full catalog is automatically added to your platform's course catalog collection. **Superadmins cannot activate, deactivate, edit or remove it in any way. They can only set the visibility of the catalog to end users.**

In order to manage the catalog's visibility to users, you must assign users to view the catalog, then users can enroll into courses by themselves. The catalog visibility depends on which users are assigned to it. In order to prevent users from seeing the catalog, do not assign them to the catalog. Refer to [this article](#) to learn more about catalog management.

NAME	DESCRIPTION			
Selling courses	Test	3	1	<input checked="" type="checkbox"/> X
Catalog with Admin Approval subscription Courses (Mixed)	Catalog with Admin Approval subscription Courses (Mixed)	0	1	<input checked="" type="checkbox"/> X

Skills			5	

Even if the LinkedIn Learning catalog is available for users to view, none of the course in this catalog will appear in your Course Management area in the platform until a user has enrolled into one of the courses from the catalog. **At that point, once a user has enrolled into the course, it will then appear on the main Courses page in your LMS, and you can edit any platform-level details related to it.**

Attending a LinkedIn Learning Course as a Learner

As a learner, you have full visibility of the LinkedIn catalog only if the platform Superadmin gave you the rights to see it. Log in to the platform and select **Courses Catalog** from the Main Menu. The LinkedIn Learning Catalog is listed among the other catalogs assigned to you, and includes all the courses downloaded from the LinkedIn Learning platform.

A message will confirm your subscription, and prompt you to start the course right away, or to access the **My Courses and Learning Plans** area of the platform where the course you have just enrolled to will be listed together with the other courses assigned to you. Click on the course tile to access the course main page, then **Start Learning Now** to launch the training.

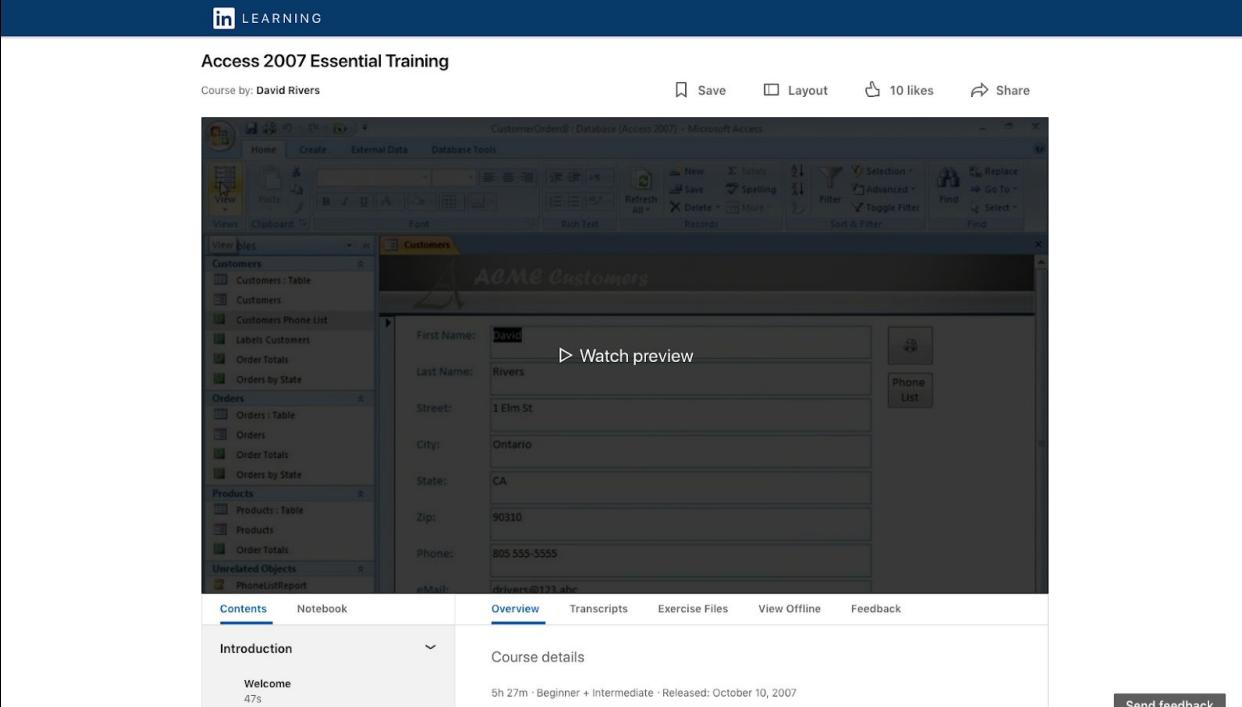

The screenshot shows the Docebo LMS interface. At the top, there is a navigation bar with the Docebo logo, a search bar, and a trial status message: "Trial status: 293 days left". Below the navigation bar, there is a "Back to My Courses" link. The main content area displays a course card for "Access 2007 Essential Training". The card shows a progress bar at 0/1 lessons completed and a green "START LEARNING NOW" button. Below the card, there is a message: "Click Start Learning Now to begin your course". The interface also includes a sidebar with course navigation icons.

You will be redirected to the LinkedIn Learning portal. You may need to log in to LinkedIn Learning with your LinkedIn credentials, unless you already have an open LinkedIn session.

The screenshot shows the LinkedIn Learning login page. The page features a background image of a person walking down a city street. The LinkedIn logo is at the top left, and "Sign in" and "Join now" buttons are at the top right. The main form has fields for email ("user@docebo.com") and password, and a "Log in" button. Below the form, there are links for "Forgot password?" and "Not a member? Join now".

After the login, you will be automatically redirected to the course page.

The screenshot shows a Microsoft Access database window titled 'CustomerOrdersB : Database (Access 2007) - Microsoft Access'. The 'Customers' table is open, displaying a record for 'DAVID Rivers'. The record includes fields for First Name, Last Name, Street, City, State, Zip, Phone, and Email. A 'Watch preview' button is visible next to the first name field. The Access ribbon is at the top, and the navigation pane on the left lists tables like 'Customers', 'Orders', and 'Products'. The course page for 'Access 2007 Essential Training' is overlaid on the Access window, showing the 'Overview' tab selected. The page includes a 'Send feedback' button in the bottom right corner.

Once the course is over, you will not be automatically redirected to Docebo.
