Automated Search Alerts

What are Automated Search Alerts?

Stay on top of new relevant search results for your most search criteria via automated push notifications, email, and in-product. Daily new candidates are sent automatically based on your most engaged project. Once you start working on a new project, alerts will adapt to send you new relevant search results.

Release Date: Will be available to all global customers by end of March 2024.

Automated new candidate alerts for your most engaged project
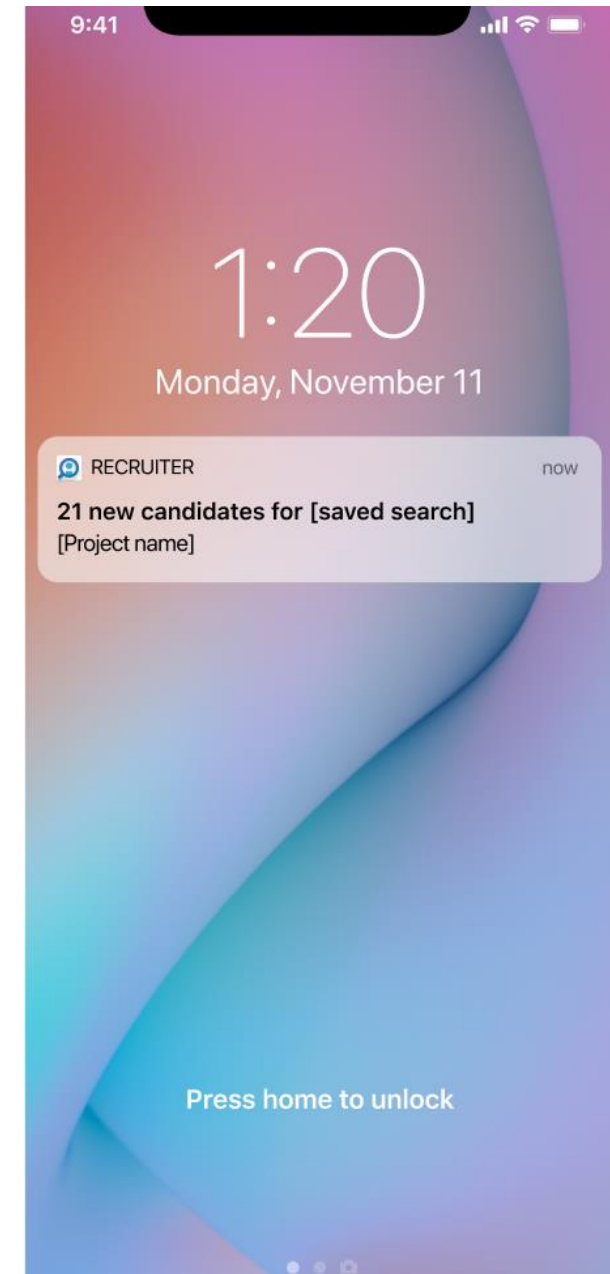

Minimize manual work

- Recruiter detects which project you are most actively sourcing in

- New profiles matching your search criteria within this project are automatically delivered via push notification, email, and in-product notifications

- When Recruiter notices that you're not engaged in a project anymore, it will automatically stop sending updates for that project and pivot to the project you're most actively engaging with

Stay on top of fresh profiles

- Automated Search Alerts notify you when new members or existing members with recently updated profiles match your search criteria

- These candidates have recent profile updates, meaning there's potential to engage them while they've recently been active on LinkedIn or haven't received an influx of outreach yet

Manage relevant alerts

- Users can still set manual search alerts in addition to receiving automated alerts

- Users who want to opt out can manage notification settings to turn on/off notification / channel or unsubscribe from email

FAQs

- **How are Automated Search Alerts different from Saved Search Alerts?** Saved search alerts are sent for manually created and maintained saved searches. Active Project Search Alerts, on the other hand, are sent for your most active project, and will automatically send new relevant candidates as you engage with different projects.

- **Where do I change settings for Automated Search Alerts?** Settings for push notifications can be changed by going to "Notifications" under "My Account Settings".

- **How often are alerts sent?** Alerts are sent daily.

- **Where do alerts get sent?** Alerts are sent via email, push notification for mobile, and in-product.

- **Who do alerts get sent to?** Alerts are sent to Recruiter users who have permissions to search and send InMails, and have been engaged in a project in the last 72 hours.

- **Do I need a saved search to receive alerts?** No. Alerts are sent automatically for your most engaged project. When Recruiter notices you're engaging with a new project, alerts will adjust accordingly.

- **How is "most engaged project" defined?** We define "most engaged" by looking at searches made, profiles viewed, InMails sent, and candidates saved within a project.

- **Is there a way to adjust the frequency of alerts?** No. You can turn off automated alerts, but you cannot adjust their send frequency.
