

Learning across mobile and desktop devices

Research shows that 30 percent of learners use mobile devices for instruction. It's a number likely to keep growing. LinkedIn Learning accommodates this trend, making it easy for learners to enjoy on-demand instruction—anytime and anywhere.

LinkedIn Learning desktop and mobile apps work together to make skill building easy. Let learners know that with LinkedIn Learning, they can:

Download courses

Add them to a mobile device for offline viewing to watch bite-size videos while on the go.

Switch back and forth

Toggle between mobile and desktop devices. LinkedIn Learning remembers where learners left off and automatically updates their course histories.

Bookmark courses

Select courses of interest using a mobile device, then conveniently watch them on a desktop.

Access LinkedIn Learning on mobile

Instruct your learners to:

- Open the **LinkedIn Learning app**
- Sign in using their LinkedIn login and password
- Authenticate with their company credentials
